The Mapping of the World Rodney W. Shirley,1993 Look back to when the Americas were still the New World, and mapmaking was still a fine art. Now available and in print at less than half its previous price, this oversized, painstakingly compiled classic collection of early printed maps from 1472 to 1700 portrays a revolution in progress. As explorers arrived in lands formerly unknown to Europe, and returned home with accounts of their travels, cartography changed to reflect new ideas. Over 600 examples in both color and black and white, range from the simple to the highly decorative. Isidore of Seville's 1472 small woodcut map -- the first ever printed -- portrays the world in miniature, with continents represented only in words. Hans Rust's elaborate medieval map (c. 1480), by contrast, has labels, scrolls, and dozens of small drawings. Francesco Rosselli's map, made roughly in 1508, already incorporates the Americas. A section of charts provides information on cartographic developments in a glance.

*The World Map, 1300–1492* Evelyn Edson,2007-07-15 A history of the development of world maps during the later medieval period in the centuries leading up to Columbus’s journey. In the two centuries before Columbus, mapmaking was transformed. *The World Map, 1300–1492* investigates this important, transitional period of mapmaking. Beginning with a 1436 atlas of ten maps produced by Venetian Andrea Bianco, Evelyn Edson uses maps of the fourteenth and fifteenth centuries to examine how the discoveries of missionaries and merchants affected the content and configuration of world maps. She finds that both the makers and users of maps struggled with changes brought about by technological innovation?the compass, quadrant, and astrolabe?rediscovery of classical mapmaking approaches, and increased travel. To reconcile the tensions between the conservative and progressive worldviews, mapmakers used a careful blend of the old and the new to depict a world that was changing?and growing?before their eyes. This engaging and informative study reveals how the ingenuity, creativity, and adaptability of these craftsmen helped pave the way for an age of discovery. “A comprehensive and complex picture of the changing face of medieval geography. With the mastery of a formidable palette of historiographic knowledge and well-reasoned discussions of the sources, *The World Map, 1300–1492* will certainly remain an important work to consult for both medieval and early modern scholars for many years to come.” —Ian J. Aebel, *Terrae Incognitae*
