Small States Commonwealth Secretariat, 2008-03 This unique annual collection of key economic and statistical data on the world's small states--those with fewer than five million inhabitants--is an essential reference for economists, planners and policy makers. The book contains fifty-one tables covering selected economic and social indicators culled from international and national sources and presents information unavailable elsewhere. A detailed parallel commentary on trends in Commonwealth small states, looking at growth, employment, inflation and economic policy issues, permits a deeper understanding of developments behind the figures. The book also includes three topical articles: The Effects of Limited Diversification on Small States--Stephen Fletcher, St. George's University, Grenada; Insights into the Economic Development of Small, Often Island, Economies--Godfrey Baldacchino, University of Prince Edward Island, Canada and Geoff Bertram of Victoria University, Wellington, New Zealand; and Macroeconomic Stability in Small States--Lawrence L. Schembri, Bank of Canada.

Effective Groundwater Model Calibration Mary C. Hill,Claire R. Tiedeman,2006-08-25 Methods and guidelines for developing and using mathematical models Turn to Effective Groundwater Model Calibration for a set of methods and guidelines that can help produce more accurate and transparent mathematical models. The models can represent groundwater flow and transport and other natural and engineered systems. Use this book and its extensive exercises to learn methods to fully exploit the data on hand, maximize the model's potential, and troubleshoot any problems that arise. Use the methods to perform: Sensitivity analysis to evaluate the information content of data Data assessment to identify (a) existing measurements that dominate model development and predictions and (b) potential measurements likely to improve the

reliability of predictions Calibration to develop models that are consistent with the data in an optimal manner Uncertainty evaluation to quantify and communicate errors in simulated results that are often used to make important societal decisions Most of the methods are based on linear and nonlinear regression theory. Fourteen guidelines show the reader how to use the methods advantageously in practical situations. Exercises focus on a groundwater flow system and management problem, enabling readers to apply all the methods presented in the text. The exercises can be completed using the material provided in the book, or as hands-on computer exercises using instructions and files available on the text's accompanying Web site. Throughout the book, the authors stress the need for valid statistical concepts and easily understood presentation methods required to achieve well-tested, transparent models. Most of the examples and all of the exercises focus on simulating groundwater systems; other examples come from surface-water hydrology and geophysics. The methods and guidelines in the text are broadly applicable and can be used by students, researchers, and engineers to simulate many kinds systems.

A Football Story Peter F. Lester, 2023-07-08 A Football Story examines the journey of Mike Wolf from the gridiron at Western Kansas University, where he was a student and an outstanding football player, to the college lecturer at that university, where he reinvents himself as a talented assistant professor in computer engineering. Despite academic demands, he is drawn back into football as a member of the university athletics board. Only a few months into his appointment, a serious cheating episode carried out by members of the football team drives Mike to find a way to right the wrongs that contaminate the sport. The journey is complex. His personal experiences go beyond intellectual challenges to violent attacks protesting his efforts to clean up football. Even he couldn't have anticipated the final impact of his efforts.
